

Environmental Policy

Environmental Policy

Landell Mills' environmental policy aims to **keep our operational environmental footprint at a minimum**. We commit to prevent pollution, conserve resources, reduce waste, and minimise our emissions. Our objectives are to:

- Identify and manage environmental risks;
- Collaborate with our clients to ensure that the environment is protected during project implementation;
- Maximise environmental benefits within our projects;
- Minimise our carbon footprint;
- Minimise waste to landfill;
- Promote the sustainable management of resources within our work.

We achieve this through following regulatory, good practice and voluntary measures. We look to make continual improvements to our performance.

The effectiveness of our environmental policy is reviewed annually, and action taken as necessary. The policy is available to all staff on SharePoint and to interested parties on our website (<https://www.landell-mills.com/policies>).
